

Testing approach

Scope:

- As a user, I want to check the number of results of a search.
- As a user I want to see results relates to my search.

Entry criteria:

- The website is up and running.
- Integration is done.

Coverage:

FE:

- UI matches the design.
- No results page matches the design.
- FE payload contains Search terms.
- API failure,
- No results -> automation.
- Search term sanitization
- Displaying BE results correctly -> automation.

BE:

- Returned results are related to the search term.
- The correct number of results is returned.
- BE doesn't accept scripts
- No returns BE response.

Test Environment:

- Chrome
- Firefox

Exit Criteria:

- All functionalities work correctly.
- Automation covering all main scenarios.
